

Get the facts, get the vax.

The evidence is in for COVID-19 vaccines.

- » Millions of people in the US have received COVID-19 vaccines.
- » They are **over 95% effective** at preventing severe illness, hospitalization and death due to COVID-19, including the Delta variant.
- » The **most intense safety monitoring** in US history has been applied to COVID-19 vaccines.

How COVID-19 vaccines work:

- » mRNA vaccines (Pfizer and Moderna) allow your body to quickly identify, remember, and respond to a virus even if it changes over time. Scientists have been studying mRNA vaccines for over 10 years.
- » The Janssen/Johnson & Johnson vaccine utilizes an adenovirus to enter the cell and create proteins that trigger the immune system to react defensively against COVID-19.

COVID-19 vaccines contain:

- » **No** live virus
- » **No** fetal cells
- » **No** metals (iron, cobalt, lithium or others)
- » **No** DNA-changing material
- » **No** mercury
- » **No** latex
