*Laser Hair Removal*

## How Does Laser Hair Removal Work?

GentleMax Pro uses laser technology to deliver an intense but gentle burst of energy onto targeted areas of the skin, delivering a controlled amount of targeted therapeutic heat safely and effectively.

## How Long Does Treatment Take?

A treatment could take as little as a few minutes to as long as an hour, depending on the area being treated.

## What Can I Expect During Treatment?

Treatment will take place in your practitioner's office. Your practitioner will utilize a small hand piece to deliver laser pulses onto the desired treatment area.

Some patients may feel a slight discomfort with each laser pulse, sometimes described as a snap of a rubber band on the skin.

Discomfort is resolved quickly and minimized with the patented Dynamic Cooling Device (DCD) or air cooling. For some patients, a topical anesthetic may be used prior to treatment.

## How Do I Prepare for Treatment?

Avoid plucking, electrolysis or waxing for six weeks prior to treatment. Skin should be clean-shaven and thoroughly cleansed, removing any makeup, creams, oils, or self-tanning products before laser treatment. Do not expose the intended treatment area to sunlight or tanning booth light prior to or immediately after treatment.

## When Can I Expect Results?

Number of sessions depends on current color/coarseness of hair, as well as individual growth cycles/pattern.

*Treatments typically do not work on non-pigmented/blonde hair.*

## How Much Will it Cost?

The following price list is an estimate based on typical hair removal needs for the areas listed. A more accurate estimate will be given at your free consultation.
